# American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

**CAUTION NOTICE:** This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword	v
9 Pumps – general guidelines	1
9.0 Scope	1
9.0.1 Preferred measurement units and conversion factors	1
9.1 Materials	5
9.1.1 Introduction	5
9.1.2 Data on liquids	6
9.1.3 Factors affecting material selection	6
9.1.4 Positive displacement pumps – materials – general designations	12
9.1.5 Rotodynamic pumps – materials – general designation	14
9.1.6 Materials of construction	16
9.2 Measurement of airborne sound	28
9.2.1 Instrumentation	28
9.2.2 Operation of pumping equipment	28
9.2.3 Test environment	28
9.2.4 Microphone locations	29
9.2.5 Measurement technique	38
9.2.6 Measurements to be taken	38
9.2.7 Calculation and interpretation of readings	39
9.2.8 Presentation of data	40
9.3 Decontamination of returned products procedure	42
Appendix A Bibliography	44
Appendix B Index (informative)	46
Figures	
9.0 — Pump type tree diagram	4
9.1.3.5.1 — Galvanic series of metals and alloys beginning with the corroded end (anodic, or least noble)	9
9.1.6.19 — General ranking of cavitation erosion resistance of common cast metals	27
9.2.4a — Horizontal end suction centrifugal pump	30
9.2.4b — Horizontally split rotodynamic pump	31
9.2.4c — Vertical in-line centrifugal pump	32
9.2.4d — Double case BB5 pump	33
9.2.4e — Horizontally split multistage rotodynamic pump	34
9.2.4f — Horizontal reciprocating pump	34
9.2.4g — Vertical reciprocating pump	35
9.2.4h — Horizontal rotary gear pump	36
9.2.4i — Horizontal rotary screw pump	36
9.2.4j — Vertical rotary pump	37
9.2.4k — VS1 pump	38
9.2.8 — Airborne sound level test report	41

Tables

9.0.1 — Preferred measurement units and conversion factors . . . . .	1
9.1.3.7 — Relative ranking of adhesive wear resistance of wrought materials . . . . .	11
9.2.7.1 — Corrections for background noise . . . . .	39
