## FOREWORD

The first *Survey of Underground Gas Storage Facilities in the United States and Canada* (Catalog No. X54266) was undertaken during 1965–66 and published by the American Gas Association (AGA) in 1966. Pertinent data on the general physical characteristics of known underground gas storage projects were reported. The second edition (and first revision — Catalog No. X54270) was published in 1970. Subsequent editions were published as follows: third edition published in 1978 (Catalog No. XU0678); fourth edition published in 1983 (Catalog No. XY0783); fifth edition published in 1988 (Catalog No. XU8809A); sixth edition published in 1993 (Catalog No. XU9307); seventh edition published in 1997 (Catalog No. XU9701); eighth edition published in 1999 (Catalog No. XU9901); ninth edition published in 2001 (Catalog No. XU0212); tenth edition published in 2007 (Catalog No. XU0404). Eleventh edition published in 2011 (Catalog No. XY1102). Twelfth edition published in 2014 (Catalog No. XU1401). This is the thirteenth edition in the series (Catalog No. XU1706).

This document contains information as provided by the operators and/or owners of the underground storage facilities and/or reported to the editor (in the case of sold facilities) for the participation year listed in under "Last Updated" or noted in "Footnotes". Part I provides a brief synopsis of the history of underground gas storage in North America. Part II lists data reported by the storage facility operators/owners. All facilities – active, inactive, abandoned, in the process abandonment or under construction – are listed and identified. Information is reproduced as submitted to AGA. In instances where the data were provided in units other than requested, conversions were made accordingly.

This survey is a product of the AGA Underground Storage Committee (USC). AGA would like to thank the officers of the USC and the members of the Statistics / Computer Capabilities task group, in particular, Mark Gredell, Thomas Chrisfield and Matthew Rowan, for their significant contributions to this edition of the publication. Furthermore, the USC would like to acknowledge all survey respondents who provided facility data updates.
