

Australian/New Zealand Standard™

Cellulose-cement products

Part 1: Corrugated sheets

Standards Australia

STANDARDS
NEW ZEALAND
Wharenga Aotearoa

AS/NZS 2908.1:2000

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee BD/40, Fibre Cement Building Products. It was approved on behalf of the Council of Standards Australia on 3 March 2000 and on behalf of the Council of Standards New Zealand on 4 April 2000. It was published on 12 May 2000.

The following interests are represented on Committee BD/40:

Australian Building Codes Board
Australian Chamber of Commerce and Industry
Australian Institute of Building
Federation of Wall and Ceiling Industries, Australia and New Zealand
Housing Industry Association, Australia
New Zealand Manufacturers Federation
Master Builders, Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at www.standards.com.au or Standards New Zealand web site at www.standard.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

RECONFIRMATION NOTICE

Major stakeholders of this publication have reviewed the content of this publication and in accordance with Standards Australia procedures for reconfirmation, it has been determined that the publication is still valid and does not require change.

Certain documents referenced in the publication may have been amended since the original date of publication. Users are advised to ensure that they are using the latest versions of such documents as appropriate, unless advised otherwise in this Reconfirmation Notice.

Approved for reconfirmation in accordance with Standards Australia procedures for reconfirmation on 29 August 2018.

Approved for reconfirmation in New Zealand on behalf of the New Zealand Standards Approval Board on 18 June 2020.

NOTES

Australian/New Zealand Standard™

Cellulose-cement products

Part 1: Corrugated sheets

First published in Australia as AS 2908—1987.
Revised and redesignated as AS 2908.1—1992.
Jointly revised and designated as AS/NZS 2908.1:2000.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee BD/40, Fibre Cement Building Products, to supersede AS 2908.1—1992, *Cellulose cement products, Part 1: Corrugated sheets*.

The objective of this Standard is to provide users with the characteristic requirements and methods of test for corrugated cellulose-cement sheets for use primarily as roofing and cladding.

The sheets specified in this Standard may be installed in accordance with AS/NZS 1562.2, *Design and installation of sheet roofing and wall cladding, Part 2: Fibre-reinforced cement*. So that the best use is made of corrugated cellulose-cement sheets for roofing and cladding, it is recommended that this series be read in conjunction with AS/NZS 1562.2.

This Standard is the first part in a series of cellulose-cement products Standards, which comprises the following:

AS/NZS

- 2908 Cellulose-cement products
- 2908.1 Part 1: Corrugated sheets (this Standard)
- 2908.2 Part 2: Flat sheets (identical with ISO 8336:1993)

The objectives of this revision are—

- (a) to develop it as a Joint Australian/New Zealand Standard; and
- (b) to update the Standard with the newly developed technology and information.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.

STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

Australian/New Zealand Standard
Cellulose-cement products

Part 1: Corrugated sheets

1 SCOPE

This Standard sets out requirements for corrugated cellulose-cement sheets for use primarily as roofing and cladding. It also applies to autoclaved sheets in which the cement is partially replaced by ground silica.

This Standard covers sheets that are finished with one of the following:

- (a) Their natural colour.
- (b) Colouring matter added to their composition.
- (c) Coloured or uncoloured adherent coatings on their surfaces.

This Standard does not apply to asbestos-fibre-reinforced sheets.

NOTE: Advisory information on alternative methods of determining compliance with this Standard is given in Appendix A.

2 REFERENCED DOCUMENTS

A list of documents referred to in this Standard is given in Appendix B.

3 CLASSIFICATION

Corrugated sheets covered by this Standard shall be divided into three classifications according to the depth of corrugation, as given in Table 1.

NOTE: It is recommended that the classification of a corrugated sheet material be specified in all appropriate technical literature.

TABLE 1
PROFILE DEPTH CLASSIFICATION

Profile class	Corrugated depth, mm	
	Less than	Not less than
1	50	45
2	60	50
3	75	60

4 COMPOSITION

Corrugated cellulose-cement sheets complying with this Standard shall consist primarily of an inorganic hydraulic binder, or a calcium silicate formed by a chemical reaction of a siliceous and calcareous material, reinforced by cellulose fibres to which other organic or synthetic fibres may be added. The addition of process aids, fillers and pigments, which are compatible with the cellulose-cement mixture, is acceptable.
