## Polybutylene pipe systems

### Part 1: Polybutylene (PB) pipe extrusion compounds

**AS/NZS 2642**  
**Polybutylene pipe systems**

**AS/NZS 2642.1:1994**  
**Polybutylene (PB) pipe extrusion compounds**  
*(In Professional Package 61B)*

11pp DD  
Specifies the requirements for polybutylene extrusion compounds suitable for making polybutylene pipe for hot and cold water applications. Polybutylene compound complying with this Standard is not intended to be manufactured into pipes for use in gas reticulation.

*Committee PL3: Supersedes AS 2642.1—1989; Draft for Comment DR 92036; Publication date 1994-01-17; ISBN 0 7262 8553 6.*

This Australian Standard was prepared by Committee PL/3, Polybutylene Pipe Systems. It was approved on behalf of the Council of Standards Australia on 2 May 1989 and published on 13 November 1989.

---

The following interests are represented on Committee PL/3:

Confederation of Australian Industry  
Engineering and Water Supply Department, S.A.  
Hunter District Water Board, N.S.W.  
Melbourne and Metropolitan Board of Works  
Plastics Institute of Australia  
Water Board, Sydney  
Water Resources Commission, Qld

---

**Review of Australian Standards.** To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

**Polybutylene pipe systems**

**Part 1: Polybutylene (PB) pipe  
extrusion compounds**

---

First published as AS 2642.1—1983.  
Second edition 1989.

## PREFACE

This Standard was prepared by the Standards Australia Committee on Polybutylene Pipe Systems, acting under the authority of the Plastics Standard Board, to supersede the 1984 edition. The Standard is one of a series relating to polybutylene pipe systems; other Standards are AS 2642.2, *Polybutylene (PB) pipe for hot and cold water applications*, AS 2642.3, *Mechanical jointing fittings for use with polybutylene (PB) pipes for hot and cold water applications*.

In the preparation of this Standard the committee took cognizance of ASTM D 2581, *Polybutylene plastics moulding and extrusion materials*.

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the Head Office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

## STANDARDS AUSTRALIA

**Australian Standard**  
**Polybutylene pipe systems**

**Part 1: Polybutylene (PB) pipe extrusion compounds**

**1 SCOPE.** This Standard specifies requirements for polybutylene extrusion compounds suitable for making polybutylene pipe for hot and cold water applications.

**NOTES:**

1. Advisory information on alternative methods of determining compliance of a lot with this Standard is given in Appendix A.
2. Polybutylene compound complying with this Standard is not intended to be manufactured into pipes for use in gas reticulation.

**2 REFERENCED DOCUMENTS.** The following documents are referred to in this Standard:

AS	
1193	Methods for the determination of the density and relative density of plastics excluding cellular plastics
1199	Sampling procedures and tables for inspection by attributes
1349	Bourdon tube pressure and vacuum gauges
1399	Guide to AS 1199, Sampling procedures and tables for inspection by attributes
1821-23	Suppliers quality systems
1984	Vernier callipers
2000	Guide to AS 1821-23—Suppliers quality systems
2101	Internal micrometers (including stick micrometers)
2102	External micrometers
2490	Sampling procedures and charts for inspection by variables for percent defective
2642	Polybutylene pipe systems
2642.2	Part 2: Polybutylene (PB) pipe for hot and cold water applications
3900	Quality systems—Guide to selection and use
3901	Quality systems design/development, production, installation and servicing
3902	Quality systems for production and installation
3903	Quality systems for final inspection and test
3904	Quality systems—Guide to quality management and quality system elements
ASTM	
D 1238	Test method for flow rates of thermoplastics by extrusion plastometer
BS	
2782	Methods of testing plastics Part 8: Methods 823A and 823B—Methods for the assessment of carbon black dispersion in polyethylene using a microscope

BS  
6920

Suitability of non-metallic products for use in contact with water intended for human consumption with regard to their effect on the quality of the water

**3 DEFINITIONS.** For the purpose of this Standard, the definitions below apply.

**3.1 Hoop stress**—the stress in a pipe or fitting under pressure acting tangentially to the perimeter of a transverse section.

**3.2 Long-term hydrostatic stress**—the continuously applied hoop stress which it is estimated will cause failure at a specified temperature and time.

**3.3 Hydrostatic design stress**—the estimated hoop stress due to internal hydrostatic pressure, that can be applied continuously at a specified temperature with a high degree of certainty that failure will not occur. It is obtained by the application of a safety factor to the extrapolated 100 000-hour long-term hydrostatic stress value.

**3.4 Working pressure**—the maximum pressure that can be sustained by the type and class of pipe or fitting for its estimated useful life under the anticipated working conditions.

**3.5 Test pressure**—the pressure applied internally to pipes and fittings when being tested for strength and watertightness.

**3.6 Reference curve**—the curve obtained by connecting the points 7.2 MPa at 0.1 h, 6.8 MPa at 170 h, and 4.1 MPa at 100 000 h, of a failure stress-time graph plotted on log/log graph paper.

**3.7 Pipe material temperature**—the average temperature estimated as applying through the full wall thickness.

**3.8 Type test**—a test intended to prove the suitability and performance of a new composition, a new compounding or processing technique, or a new design or size of pipe, joint or fitting.

**4 TYPES.** Polybutylene compound shall be classified into types as follows:

- (a) *Type POTABLE*—suitable for use in the conveyance of potable substances.
- (b) *Type NON-POTABLE*—for use in applications not requiring a potable grade of compound, e.g. transport of slurries, chemicals.

**5 COMPOSITION.**

**5.1 General.** Polybutylene polymer shall be prepared by the polymerization of not less than 85 percent butene-1 and not less than 95 percent of total olefins by mass. Polybutylene polymer shall be pre-compounded.
