**DIMENSIONS OF HUBS AND
REELS FOR MAGNETIC TAPE
FOR INSTRUMENTATION
INTERCHANGE**

Part 2—PRECISION REELS

(ISO Title: Information processing—Precision reels for magnetic tape used in interchange instrumentation applications)

This Australian Standard was prepared by Committee IS/1, Information Processing Systems. It was approved on behalf of the Council of the Standards Association of Australia on 12 September 1988 and published on 12 December 1988.

The following interests are represented on Committee IS/1:

Australian Association of Permanent Building Societies
Australian Bankers' Association
Australian Bureau of Statistics
Australian Computer Equipment Manufacturers Association
Australian Computing Services Association
Australian Computer Users Association
Australian Information Industry Association
Canberra College of Advanced Education
CSIRO, Division of Information Technology
Department of Defence
Department of Industry, Technology and Commerce
Latrobe University
Life Insurance Federation of Australia
Public Service Board, N.S.W.
Telecom Australia
University of Technology, Sydney

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

PREFACE

This revised Standard was prepared by the Association's committee on Information Processing Systems. It is identical with and has been reproduced from International Standard ISO 1860—1986, *Information processing—Precision reels for magnetic tape used in interchange instrumentation applications*.

For the purposes of this Australian Standard, the ISO text should be modified as follows:

Terminology—The words 'Australian Standard' should replace the words 'International Standard' wherever they appear.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

Precision reels for magnetic tape used in interchange instrumentation applications

0 Introduction

The performance levels contained in this International Standard represent the minimum acceptable levels of performance for interchange purposes. They, therefore, represent the performance levels which the interchange media are expected to meet or surpass during their useful life and thus define end-of-life criteria for interchange purposes. The performance levels in this International Standard are not intended to be used for purchase specifications.

Quantitative limits for some of the requirements falling within the scope of this International Standard are not stated but are left to agreement between interchange parties. Standard test methods and measurement procedures should be used to establish such quantities.

The annex, which does not form part of this International Standard, gives recommended characteristics for wraparound reel bands.

1 Scope and field of application

This International Standard specifies the recorder/reproducer interface or envelope requirements for metal- and glass-flanged precision reels with 76 mm (3 in) centrehole, for magnetic tape used in interchange instrumentation applications.

NOTE — Numeric values in the S.I. and/or Imperial measurement system in this International Standard may have been rounded off and therefore are consistent with, but not exactly equal to, each other. Either system may be used, but the two should be neither intermixed nor reconverted. The original design was made using the Imperial measurement system.

Conversions of toleranced dimensions from Imperial units to S.I. units have been performed according to ISO 370.

2 Compatibility

Except as indicated in clause 0, interchange parties conforming to this International Standard should be able to achieve compatibility with a minimum need for additional exchange of technical information.

3 Reference

ISO 370, *Toleranced dimensions — Conversion from inches into millimetres and vice versa.*

4 Requirements

4.1 Dimensions

For measurement purposes, dimensions are referred to the reference plane (see figure 1) which is defined as the mounting surface of the reel.

The dimensions of the reels shall be as specified in the figure and tables 1, 2, 3 and 4.

4.2 Symmetry

Reels and hubs shall be symmetrical to permit mounting from either side.

NOTE — In the section view in figure 1, the mounting surface and the reference plane are shown on the right side. For left side mounting, the same dimensions apply with the reference plane taken on the left mounting surface. Thus, designation of left and right sides is arbitrary and is not intended to imply asymmetry.
