**Performance of household electrical
appliances—Dishwashers**

Part 2: Energy labelling requirements

standards Australia

STANDARDS
NEW ZEALAND
Te Kaitiaki Takekōwhiri

AS/NZS 2007.2:2000

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-015, Quality and Performance of Household Electrical Appliances. It was approved on behalf of the Council of Standards Australia on 15 March 2000 and on behalf of the Council of Standards New Zealand on 8 March 2000. It was published on 31 March 2000.

The following interests are represented on Committee EL-015:

Australian Association of Certification Bodies
Australian Consumers Association
Australian Electrical and Electronic Manufacturers Association
Australian Industry Group
Australian Retailers Association
Consumer Electronics Suppliers Association, Australia
Consumer Federation of Australia
Department of Mines and Energy, Qld
Electrical Compliance Testing Association
Energy Efficiency and Conservation Authority of New Zealand
Ministry of Energy and Utilities, N.S.W.
National Appliance and Equipment Energy Efficiency Committee
New Zealand Manufacturers Federation
Office of the Chief Electrical Inspector, Vic.
Office of Technical Regulators, S.A.

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at www.standards.com.au or Standards New Zealand web site at www.standard.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL/15, Quality and Performance of Household Electrical Appliances.

This Standard incorporates Amendment No. 1 (December 2001). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The AS/NZS 2007 series is comprised of two Parts, as follows:

AS/NZS

2007	Performance of household electrical appliances—Dishwashers
2007.1	Part 1: Energy consumption and performance
2007.2	Part 2: Energy labelling requirements (this Standard)

The overall objective of the AS/NZS 2007 series of Standards is to promote high levels of performance and energy efficiency in electric dishwashers.

The Parts of the AS/NZS 2007 are summarized as follows:

- (a) *Part 1* Includes performance test procedures and minimum performance criteria for dishwashers.
- (b) *Part 2* Includes algorithms for the calculation of the energy efficiency star rating and projected energy usage, performance requirements, details of the energy label and requirements for the valid application thereof. It has been structured to be suitable for reference in regulatory legislation and to be used in conjunction with Part 1.

This edition contains the new star rating algorithms developed during 1999 which will be introduced together with the new energy label for dishwashers during mid to late 2000. Part 1 of this Standard remains largely unchanged, except for some minor amendments, which have been passed subsequent to its original publication.

The main changes in this Part 2 Standard are as follows:

- (i) Introduction of new energy labelling algorithms to reduce bunching of star ratings that were becoming apparent by the late 1990s.
- (ii) Introduction of a redesigned more consumer friendly energy label.
- (iii) This Standard continues to allow the program for energy labelling to be specified by the manufacturer, (the same requirements as AS/NZS 2007.2:1998). It is anticipated that, from October 2002, all then existing registrations will require re-testing to an amended (anticipated publication in early 2002) version of AS/NZS 2007.1. Among other changes, this will require testing on the program specified for a normally soiled load.
- (iv) Specification of single cold connect as the primary water connection mode in most cases.

A1

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

This Standard is published with the approval of the combined state regulatory authorities and is structured to be suitable for reference in energy labelling regulatory legislation. It refers to AS/NZS 2007.1 for test procedures.

This Standard supersedes AS/NZS 2007.2:1998 on 1 October 2000. From 1 April 2000 until 30 September 2000 it is anticipated that regulatory authorities will approve appliances in accordance with either AS/NZS 2007.2:1998 or this Standard. On 1 October 2000, all registrations according to previous Standards will be cancelled. For these appliances to be sold, they are required to be re-registered in accordance with this Standard prior to 1 October 2000.

It is expected that concessions will apply until 1 October 2001 to allow the sale of products with old labels direct from storage facilities and for which it can be demonstrated that they were manufactured locally or imported before 1 October 2000. However, all products on display for sale will be required to display new labels from 1 October 2000, irrespective of their date of manufacture or importation.

All registrations submitted and records kept from 1 October 2000 will require test reports in accordance with AS/NZS 2007.1.

Check testing, where applicable, will be undertaken to the version of the test Standard which has been used to support the current energy label for that model.

NOTES:

- 1 Given that all products on display have to carry the new label shown in this Standard from 1 October 2000, it is preferred that manufacturers submit the new label in all registration applications from 1 April 2000.
- 2 Models registered prior to 1 April 2000 can be re-registered with the new label shown in this Standard at any time during the period from 1 April 2000 to 30 September 2000.
- 3 Some regulators may accept pre-registration applications with the new label shown in this Standard prior to 1 April 2000 to facilitate approval soon thereafter.
- 4 It is not necessary to seek re-approval of the label when the label is changed from the transition version to the final version with the solid green bar at the base. However, the final label should also be submitted with the energy labelling application.
- 5 Administrative arrangements during the transition period may vary so registration holders should contact their regulator to obtain detailed requirements with respect to labelling and registration requirements.

STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

Australian/New Zealand Standard

Performance of household electrical appliances—Dishwashers

Part 2: Energy labelling requirements

S E C T I O N 1 S C O P E A N D G E N E R A L

1.1 SCOPE

This Standard specifies the energy labelling requirements for electric dishwashers intended for household and similar use. This Standard does not specify safety requirements.

In particular, this Standard specifies the following:

- (a) Program to be used for energy labelling.
- (b) Water connection mode.
- (c) Projected annual energy consumption.
- (d) Comparative energy consumption.
- (e) Star Rating Index.
- (f) Star rating.
- (g) Some of the requirements for energy label validity.
- (h) Performance criteria for energy labelling.
- (i) Test report format and printing requirements for dishwasher energy labels.

1.2 APPLICATION

This Standard shall be read in conjunction with AS/NZS 2007.1.

1.3 OBJECTIVE

The objective of this Standard is to define performance and energy labelling requirements, which shall be met such that a dishwasher can carry a valid energy efficiency label.

1.4 REFERENCED DOCUMENTS

The following documents are referred to in this Standard:

AS	
2007—1988	Performance of household electrical appliances—Dishwashers (withdrawn July 1998 see Clause 4.1.4)
2706	Numerical values—Rounding and interpretation of limiting values
AS/NZS	
2007	Performance of household electrical appliances—Dishwashers
2007.1	Part 1: Energy consumption and performance
