STANDARDS ASSOCIATION OF AUSTRALIA
Incorporated by Royal Charter

This Australian standard was prepared by Committee TX/15, Hospital Textiles and Textile Products. It was approved on behalf of the Council of the Standards Association of Australia on 6 June 1986 and published on 5 September 1986.

The following interests are represented on Committee TX/15:

Australian Chamber of Commerce
Australian Confederation of Apparel Manufacturers
Australian Hospital Association
Australian Wholesale Softgoods Federation
Australian Wool Corporation
AWTA Textile Testing
Confederation of Australian Industry
Department of Corrective Services, N.S.W.
Department of Defence
Department of Health
Department of Health, N.S.W.
Department of Health, N.T.
Department of Health, Qld
Government Supply Department, N.S.W.
Health Department, W.A.
Hospital Laundry Managers Association of Australia
Royal Australian Nursing Federation
South Australian Health Commission
Textile Rental and Laundry Association (Australia) Ltd
Textile Clothing and Footwear Council of Australia Ltd
Towel Manufacturers Association of Australia

Review of Australian Standards. To keep abreast of progress in industry, Australian standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all SAA publications will be found in the Catalogue of SAA Publications; this information is supplemented each month by SAA's journal 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn standards.

Suggestions for improvements to Australian standards, addressed to the head office of the Association, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This standard was issued in draft form for comment as DR 83178.

PREFACE

This standard was prepared by the Association's Committee on Hospital Textiles and Textile Products. The standard lists fabrics made from cotton, cotton/synthetic fibre blends and synthetic fibre, giving in tabular form suggested constructional characteristics and physical requirements of the grey state or finished fabric. The fabrics form the basis of most hospital textile commodities including general ward flat 'linen' items, theatre 'linen', patient apparel and theatre apparel. End uses are suggested as it is considered the fabrics so listed will cover a full range of hospital requirements. The standard is based on fabric specifications currently being used by Australian State Hospital Authorities and the Department of Defence. Appendix A sets out guidelines to be used by the purchaser at the time of order or enquiry. A method for assessing oil repellency is given in Appendix B.

TEXTILES FOR HOSPITALS AND INSTITUTIONS—FABRIC SPECIFICATIONS

SECTION 1. SCOPE AND GENERAL

1.1 SCOPE. This standard specifies requirements for cotton, cotton/synthetic and synthetic fabrics for hospital and institutional uses.

1.2 REFERENCED DOCUMENTS. A list of standards referred to in this standard is given in the Annex.

1.3 DEFINITIONS. For the purpose of this standard, the terms and definitions published by the Textile Institute, Manchester, U.K.*, apply.

1.4 DESIGNATION OF FABRICS. Each fabric is designated by an Item No which comprises two components and is indicated in the first columns of Tables 2.2 to 2.5. The first component is a designation determined by the fibre type, blend or structure as indicated in Table 1.1. The second component is an arbitrary number given to distinguish between different fabrics of the same fibre(s) or structure.

Example: C5 refers to the fifth cotton fabric listed in Table 2.2.

TABLE 1.1
DESIGNATION

Fibre or Structure	Designation
Cotton	C
Polyamide (nylon)	Pa
Polyester	Pe
Polyester/cotton	Pe/C
Terry structure	T

Blended fabrics are listed in Table 2.3. For each of these fabrics, the fibre content is listed in the second column of the table in order of dominance, each fibre designation separated by an oblique slash (/).

Example: 65/35 Pe/C refers to a fabric manufactured from blended polyester/cotton fibre consisting of 65 percent polyester and 35 percent cotton (see also AS 2622).

1.5 SELECTION OF TEST SAMPLE. A sample the full width of the fabric and at least 4 m² in area shall be selected not less than 2 m from an end and shall be representative of the lot under test.

NOTES:

- The method of sample selection is a matter for agreement between the parties concerned.
- Where it is agreed that a sealed sample be held by the purchaser, the sealed sample is to constitute the standard for appearance, handle and finish and for any other properties not defined in this standard. Should the standard and sealed sample be at variance, the standard is to be adhered to.

1.6 IDENTIFICATION. Where required, stripes and lettering shall be provided on items.

NOTE: This is a matter for agreement between the purchaser and the supplier (see Appendix A).

1.7 MARKING. The following information shall be shown on each bolt or roll and package of fabric on a drop ticket or label:

- Piece number, batch number and colour identification.
- Description or nomenclature, in accordance with Tables 2.2 to 2.5.
- Fibre content (see AS 2622 and Note 1).
- Gross and net length of bolt or roll.
- Width overall (including selvages).
- Manufacturer's name or identification.
- Care instructions in accordance with AS 1957 (see Note 1).

NOTES:

- Reference should also be made to relevant State and Federal Legislation for the labelling of fibre content and care.
- Manufacturers who place the number of this Australian standard on fabrics, on packaging or on literature related thereto should ensure that the products are manufactured to comply with the standard.

Attention is particularly drawn to the scheme for independent assurance provided by the StandardsMark which is a registered certification trademark owned by the Standards Association of Australia and which is available for use with suitable Australian standards.

The presence of the StandardsMark on or in relation to a product is an assurance that the goods have been produced under a system of supervision, control and testing applied during manufacture and including periodical inspections at the manufacturer's works in accordance with the certification mark scheme of the SAA.

The StandardsMark can be used only by manufacturers licensed under the certification mark scheme operated by the SAA, and only when accompanied by the number of the relevant Australian standard. It will usually be a requirement that the words 'Manufactured to Australian Standard' accompany the number of the standard and enclose the Mark as shown below; however, this is a matter for negotiation with the Association.

Further particulars of the terms of licence and suitability of this standard for certification purposes may be obtained from the Quality Assurance and Certification Department, Standards Association of Australia, 80 Arthur Street, North Sydney, NSW, 2060.
