

AS 2819—1985

Australian Standard[®]

**THERMOMETERS—
METEOROLOGICAL—MAXIMUM,
MINIMUM AND ORDINARY**

This Australian Standard was prepared by Committee CH/1, Laboratory Glasses and Related Apparatus and completed by Committee CH/30, Temperature Measurement. It was approved on behalf of the Council of the Standards Association of Australia on 3 July 1985 and published on 6 September 1985.

The following interests are represented on Committee CH/1:

Confederation of Australian Industry
CSIRO, Division of Applied Physics
Department of Agriculture, N.S.W.
Department of Health (Commonwealth)
Department of Science (Commonwealth)
Government Chemical Laboratories, W.A.
National Standards Commission
Railways of Australia Committee
Royal Australian Chemical Institute
Royal College of Pathologists of Australia
University of Sydney

The following interests are represented on Committee CH/30:

Australian Institute of Physics
Australian Scientific Industry Association
CSIRO, Division of Applied Physics,
Confederation of Australian Industry Association
Department of Science (Commonwealth)
National Association of Testing Authorities, Australia

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 84037.

PREFACE

This standard was initially prepared by the Association's Committee on Laboratory Glassware and Related Apparatus and finalised by the new committee on Temperature Measurement. It supersedes AS R13—1966, Maximum, Minimum and Ordinary Meteorological Thermometers.

AS R13 was based largely on the Commonwealth Bureau of Meteorology Equipment Specification No A 410, Issue 2 (April 1962) for Meteorological Thermometers—Ordinary, Maximum and Minimum. It also took account of BS 692 (1958)—Meteorological Thermometers. This revision has been undertaken in order to update the specification and to remove all reference to the Fahrenheit scale of temperature measurement.

There was some uncertainty about the adequacy of clauses specifying (a) the 'permanence' of pigment filling on the thermometer scale and (b) the corrosion resistance of metal fixtures holding thermometers to their backing. The addition of an accelerated weathering test, which could also be combined with other tests (see Clause 3.1), overcomes the uncertainty. Any stricter specifications remain the subject of contractual arrangements between interested parties.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

SECTION 1. SCOPE AND GENERAL	
1.1 Scope	4
1.2 Application	4
1.3 Designation	4
1.4 Referenced Documents	4
1.5 Definitions	4
1.6 Range	4
1.7 Packaging	4
1.8 Identification Marking	4
SECTION 2. DESIGN AND CONSTRUCTION	
2.1 Scope of Section	6
2.2 General	6
2.3 Filling for Thermometers	6
2.4 Stem of Thermometer	6
2.5 Bulb	6
2.6 Indicating Device	6
2.7 Sheath	7
2.8 Mounts	7
2.9 Vacuum above Mercury in a Maximum Thermometer	9
2.10 Dimensions	9
2.11 Graduation	9
2.12 Figuring of Graduation Lines	10
SECTION 3. PERFORMANCE REQUIREMENTS	
3.1 Introduction: Sequence for Conducting Tests	11
3.2 Alcohol Filling for Minimum Thermometers	11
3.3 Annealing	11
3.4 Ability to Withstand Elevated Temperatures	11
3.5 Thermometer Accuracy	11
3.6 Permanence of Markings	11
APPENDICES	
A Method of Testing the Operation of the Constriction in the Bore of a Maximum Thermometer	12
B Method of Testing the Operation of the Indicating Device of a Minimum Thermometer	13
C Detection of Strain in Glass using a Simple Polariscope	14
D Accelerated Weathering Test to Assess the Permanence of Markings and the Durability of the Material used to Coat the Mount	16
E Method for Assessing the Ability to Withstand Elevated Temperatures	18
F Method for Determining the Resistance of the Stem of a Thermometer to Thermal Shock	19
G Mechanical Shock Test for a Mounted Thermometer	20
H Glasses for the Bulbs of Meteorological Thermometers	21
J Method of Test for Ester Content of Spirit Filling	22
K Method of Test for Amines in Spirit Filling	23
L Determination of Compliance of a Lot	24

SECTION 1. SCOPE AND GENERAL

1.1 SCOPE. This standard specifies requirements for the design, construction and testing of—

- (a) sheathed,
- (b) unsheathed and
- (c) backed

maximum, minimum and ordinary meteorological thermometers and their mountings.

1.2 APPLICATION. This standard applies to thermometers suitable for meteorological use, primarily in a louvred screen.

1.3 DESIGNATION. Thermometers considered in this standard may be mounted or unmounted and shall comprise the following:

Maximum..... mercury-in-glass, evacuated, and graduated on the stem

Minimum..... spirit-in-glass, graduated on the stem

Ordinary..... mercury-in-glass, graduated on the stem

1.4 REFERENCED DOCUMENTS. The following standards are referred to in this standard:

AS 1199	Sampling Procedures and Tables for Inspection by Attributes
AS 1399	Guide to AS 1199, Sampling Procedures and Tables for Inspections by Attributes
AS 1580	Methods of Test for Paints and Related Materials Method 452.1 Resistance to Humidity under Condensation Conditions
AS 1821-23	Suppliers Quality Control Systems, Levels 1, 2 and 3
AS 2000	Guide to AS 1821-1823, Suppliers Quality Control Systems
AS 2433	Plastics—Method for Exposure to Ultraviolet Lamps
AS 2543	Nomenclature of Australian Timbers
AS K121	Ethanol (BS 507:1966 endorsed without amendment)

1.5 DEFINITIONS. For the purpose of this standard the following definitions apply:

1.5.1 Complete immersion—the condition when the entire thermometer is immersed in the medium whose temperature is being measured.

1.5.2 Free fall—the descent of a body (in this case, the index) moving solely under the influence of gravity (See Appendix B).

1.5.3 Index—a device designed to fit into the bore of a minimum thermometer and to move freely in one direction with the meniscus of the liquid contained in the thermometer and to then remain, until the thermometer is reset, in a position which will indicate the minimum temperature to which the thermometer has been exposed since the previous setting.

1.5.4 Permanent marking—designated markings, specifically those of a pigment or filler, which resist

erasure when the marked item (e.g. thermometer or mounting) is exposed to the test conditions specified in Appendix D of this standard.

NOTE: This definition is intended to clarify the term as applied to thermometers exposed to conditions which attempt to simulate meteorological applications of these thermometers.

1.5.5 Retraction—the movement of the index essentially under the influence of the surface tension of the liquid contained in a minimum thermometer (see Appendix B).

1.5.6 Retreat—the undesirable withdrawal, with decreasing temperature, of the mercury column of a maximum thermometer through a constriction in the bore of the thermometer (see Appendix A).

1.5.7 Shake down—the ability of the mercury column of a maximum thermometer to return through a constriction in the bore during the action of shaking down. This action is carried out when the thermometer is being reset (see Appendix A).

1.5.8 Thermometer—an instrument for ascertaining the temperature of a fluid.

NOTE: Temperatures are measured in terms of the Commonwealth legal units of measurement of temperature which in this case are Celsius degrees as defined in the Weights and Measures (National Standards) Regulations, in force under the Weights and Measures (National Standards) Act 1960-1966.

1.5.9 Throw over ('run forward')—any increase in the reading of a maximum thermometer as a result of its rotation from 88 degrees to 60 degrees from the vertical position as distinct from the normal increase due to hydrostatic effects (see Appendix A).

1.6 RANGE. The range of the thermometers shall be in accordance with the appropriate requirements of Table 1.1.

TABLE 1.1
RANGE OF METEOROLOGICAL
THERMOMETERS

Type of Thermometer	Range
Maximum	-20°C to 60°C
Minimum	-30°C to 50°C
Ordinary	{ -20°C to 60°C } -40°C to 40°C

1.7 PACKAGING. Thermometers shall be packaged individually in a substantial container of appropriate size. Packaging shall be such that the thermometer will not be damaged under normal conditions of transit and storage.

1.8 IDENTIFICATION MARKING.

1.8.1 Thermometer. The stem of the thermometer shall be permanently marked with the following information which shall be readily legible when viewed from the front:

- (a) Manufacturer's name or mark.
- (b) Year of manufacture.
- (c) Scale, i.e. 'C' denoting Celsius.
- (d) Serial number.
- (e) The type of thermometer, i.e. 'Max', 'Min', 'Ord'.
