

Australian Standard™

AS 4878.11

Methods of test for coated fabrics

Method 11: Determination of blocking resistance

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TX-005, Coated Fabrics as an Australian Standard.

The Standard is identical with and has been reproduced from ISO 5978:1990, *Rubber- or plastics-coated fabrics—Determination of blocking resistance*.

The objective of this Standard is to provide manufacturers and testing bodies with a suitable method for the determination of blocking resistance for rubber- or plastics-coated fabrics.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text, ‘this International Standard’ should read ‘this Australian Standard’.
- (b) A full point should be substituted for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian Standards, as follows:

<i>Reference to International Standard</i>	<i>Australian or Australian/New Zealand Standard</i>
ISO	AS
2231 Rubber- or plastics-coated fabrics— Standard atmospheres for conditioning and testing	—
