(ISO Title: Earth-Moving machinery—Hydraulic excavators—Hoe  
type buckets—Volumetric ratings)

This Australian Standard was prepared by Committee ME/63, Earthmoving Equipment. It was approved on behalf of the Council of the Standards Association of Australia on 3 March 1988 and published on 17 June 1988.

---

The following interests are represented on Committee ME/63:

Australian Mining Industry Council  
Bureau of Steel Manufacturers of Australia  
Construction Equipment Importers and Manufacturers of Australia  
Department of Administrative Services  
Department of Conservation, Forests and Lands, Vic.  
Department of Defence  
Department of Forestry, Qld.  
Department of Industrial Relations and Employment, N.S.W.  
Department of Labour, Vic.  
Department of Mines, Qld.  
Earth-movers and Road Contractors Association of Australia  
Forestry Commission of New South Wales  
Local Government Engineers Association of New South Wales  
Metal Trades Industry Association of Australia  
National Association of Australian State Road Authorities  
Rural Water Commission, Vic.  
Safety Institute of Australia  
Telecom Australia  
Tractor and Machinery Association of Australia  
Water Board, Sydney

**Review of Australian Standards.** *To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.*

*Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.*

*Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.*

---

*This Standard was issued in draft form for comment as DR 85191.*

FOREWORD

1. This Australian Standard corresponds with ISO 7451—1983, *Earth-moving machinery—Hydraulic excavators—Hoe type buckets—Volumetric ratings*.
2. Introduction to and complete listing of the SAA series of earth-moving machinery Standards (AS 2951 to AS 2958) is available on request.
3. Error.  
 Clause 2. It should be stated that ISO 7135 at present is at the stage of draft.
4. For the purpose of this Australian Standard the words 'International Standard' should be replaced by 'Australian Standard'.
5. ISO Standard referred to in this Standard corresponds with the following Australian Standard:

ISO Standard	Australian Standard
ISO 7546	AS 2954.5

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

# Earth-moving machinery—Rated loads and volumetric ratings

## Part 6—Hydraulic excavators—Hoe type buckets—Volumetric ratings

### 1 Scope and field of application

1.1 This International Standard specifies a procedure for approximating the volume of typical materials contained in the hoe type buckets of excavators as defined in ISO 7135. The volume ratings are based on the inside dimensions of the bucket and representative volumes on top of the bucket.

1.2 The method employs the technique of dividing the complex shape of the material in the bucket into simple geometric forms.

NOTE — These volumes of different bucket configurations may be calculated by the use of any combination of analytical, graphical or measuring techniques.

1.3 The rating method is intended to provide a consistent means of comparing bucket capacities. It is not intended to define actual capacities that might be observed in any specific application.

1.4 This International Standard applies to buckets for hoe type excavators and excludes buckets for cable operated excavators.

### 2 References

ISO 7135, *Earth-moving machinery — Hydraulic excavator — Terminology*.

ISO 7546, *Earth-moving machinery — Volumetric ratings of loader and front loading excavator buckets*.

### 3 Restrictions and limitations

3.1 The effect on volumes of local discontinuities such as bucket teeth, tooth adapters, extensions of side sheets, extensions of back sheets or cutting edges, chamfers, holes or gussets shall be ignored.

3.2 The bucket volume shall be positioned so that the plane defined by the top of the cutting edge and top of the back sheet is horizontal.

### 4 Definitions and symbols

4.1 **bucket component** : See figure 2 and ISO 7135 and 7546.

4.2 The  $X$  dimension in figures 3 and 4 is the dimension of the bucket opening between the cutting edge and the back sheet. The  $Y$  dimension is the vertical distance between the tip of the cutting edge and the depth of the contour of the side sheet.

4.3 **strike plane** : A horizontal plane across the width of the bucket from the cutting edge to the back sheet. (See figure 3.) The strike plane is used when the ratio of  $X/Y$  is 12 or greater.

4.4 **strike surface** : The cylindrical contour defined by lines lying across upper edges of the side sheets and parallel to the cutting edge shown in figure 4. The strike surface is used when the ratio of  $X/Y$  is less than 12.

4.5  $W$  is the average value of the interior width and is shown in figures 3 and 4 at approximately 2/3 the height for a tapered bucket.

4.6 **struck volume,  $V_S$**  : The volume which lies beneath the strike plane in figure 3 and the strike surface in figure 4.

4.7 **top volume,  $V_T$**  : The volume at a 1:1 slope which lies on top of the strike plane in figure 5 and the strike surface in figure 6.

4.8 **rated bucket volume,  $V_R$**  : Rated bucket capacity. This capacity is calculated by adding the struck and top volumes:

$$V_R = V_S + V_T$$

### 5 Volumetric ratings of hoe type buckets

5.1 **Boundaries of struck volume,  $V_S$ , when  $X/Y$  is 12 or greater** (see figure 3).

5.1.1 The points of intersection of the cutting edge and the side sheets.
