
Surfaces for sports areas—Methods of test

Method 7: Determination of the behaviour under a rolling load

This national Standard is the identical implementation of EN 1569:1999 and is adopted with permission of CEN, Rue de Stassart 36, B-1050 Brussels

PREFACE

This Standard was prepared by Standards Australia Committee PL-048, Sporting Surfaces.

This Standard is identical with and has been reproduced from EN 1569:1999, *Surfaces for sports areas—Determination of the behaviour under a rolling load*.

The objective of this Standard is to specify a method of test for the determination of behaviour under a rolling load of certain surfaces for sports areas.

As this Standard is reproduced from a European Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this European Standard’ should read ‘this Australian Standard’.

A full point substitutes for a comma when referring to a decimal marker.
