

Australian/New Zealand Standard™

Supplementary cementitious materials

Part 3: Amorphous silica

AS/NZS 3582.3:2016

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee BD-031, Supplementary Cementitious Materials. It was approved on behalf of the Council of Standards Australia on 11 January 2016 and on behalf of the Council of Standards New Zealand on 28 January 2016.
This Standard was published on 12 February 2016.

The following are represented on Committee BD-031:

Amorphous Silica Association of Australia
Ash Development Association of Australia
Australasian (iron and steel) Slag Association
Austroads
Bureau of Steel Manufacturers of Australia
Cement Concrete and Aggregates Australia—Cement
Cement Concrete and Aggregates Australia—Concrete
Cement and Concrete Association of New Zealand
Concrete Institute of Australia
Engineers Australia
University of New South Wales
University of Technology, Sydney

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

Australian/New Zealand Standard™

Supplementary cementitious materials

Part 3: Amorphous silica

Originated as AS 3582.3—1994.
Jointly revised and designated AS/NZS 3582.3:2002.
Second edition AS/NZS 3582.3:2016.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee BD-031, Supplementary Cementitious Materials, to supersede AS/NZS 3582.3:2002, *Supplementary cementitious materials for use with portland and blended cement*, Part 3: *Amorphous silica*.

The objective of this Standard is to set out the requirements for amorphous silica for use as a cementitious material in concrete, mortar and related applications.

The principal differences between this and the previous edition are the recognition of proven and unproven sources and amendments to sampling and testing requirements. The Standard now aligns with AS 2758 in terms of requirements for mitigating alkali silica reaction in concrete. It also aligns with AS 3972.

The term 'informative' has been used in this Standard to define the application of the appendix to which it applies. An 'informative' appendix is only for information and guidance.

Notes used in this Standard are of an advisory nature only and are used to give explanation or guidance to the user on recommended considerations or technical procedures, or to provide an informative cross-reference to other documents or publications. Notes to clauses in this Standard do not form a mandatory part for compliance with this Standard.

Statements expressed in mandatory terms in notes to tables are deemed to be requirements of this Standard.

This document includes commentary on some of the clauses of the Standard. The commentary directly follows the relevant clause, is designated by 'C' preceding the clause number and is printed in italics in a box. The commentary is for information and guidance and does not form part of the Standard.

FOREWORD

The review of the AS/(NZS) 3582 series was a planned process aimed at contemporizing these material Standards which have not been reviewed for more than 13 years.

In planning and undertaking this project a staged approach was considered in consultation with Standards Australia. That is, the project proponents consulted with, and sought the views of, major stakeholders prior to the commencement of the formal Standards review, through the joint Standards Australia/Standards New Zealand Committee BD-031. A collaborative pathway with Standards Australia was funded by industry to carry out the review.

The initial project review process encompassed various manufacturers, suppliers, users and academics with interest in these materials. Stakeholders were consulted through respective industry associations of the Ash Development Association of Australia, Australasian (iron and steel) Slag Association, Amorphous Silica Association of Australia and Cement Concrete and Aggregates Australia. A series of consultative meetings were conducted which determined the review needed to provide a performance based approach, widening the Standards applications and methods of demonstrating compliance.

The formal review considered and adopted, where appropriate, international and national standards. Existing referenced standards documents were reviewed, changes proposed and elaborated upon, and supporting information collated, with consultation across appropriate membership groups to ensure alignment across the supply chain.

In summary, the major changes include the introduction of definitions for proven and unproven sources and corresponding testing frequencies, and incorporating product conformity requirements in the normative section which was previously in the 'informative' section.

STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

Australian/New Zealand Standard
Supplementary cementitious materials

Part 3: Amorphous silica

1 SCOPE

This Standard sets out requirements for amorphous silica as a supplementary cementitious material in concrete, mortar, grout and related materials.

C1 It is acknowledged that amorphous silica may be used in other applications. Other synthetic silica-based materials may be available but are not covered by this Standard. Testing should be performed on the raw (unmodified) silica fume.

2 APPLICATION

As this standard sets out minimum requirements, it maybe necessary to supplement with related industry specifications as required.

C2 For amorphous silica used in concrete for high durability structures, typically those with a design life of 100 years or greater, supplementary specifications may be required.

3 NORMATIVE REFERENCES
