**SHIPBUILDING—  
PILOT LADDERS**

---

This Australian standard was prepared by Committee ME/59, Shipbuilding. It was approved on behalf of the Council of the Standards Association of Australia on 11 February 1987 and published on 4 May 1987.

---

The following interests are represented on Committee ME/59:

American Bureau of Shipping  
Association of Australian Port and Marine Authorities  
Australian Chamber of Shippings  
Australian Fishing Industry Council  
Australian Shipbuilders Association  
Bureau Veritas  
Department of Defence  
Department of Transport  
Det norske Veritas  
Institute of Marine Engineers  
Lloyds Register of Shipping  
Royal Institution of Naval Architects

---

**Review of Australian Standards.** *To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.*

*Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.*

*Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.*

---

*This standard was issued in draft form for comment as DR 86057.*

## PREFACE

This standard was prepared by the Association's Committee on Shipbuilding. It is identical with and has been reproduced from ISO 799-1986, Shipbuilding—Pilot Ladders. It supersedes (in part) AS 1267—1975, Ships Pilot and Embarkation Ladders.

The purpose of this standard is to specify requirements for a pilot ladder which is provided for a pilot to embark and disembark safely.

For the purpose of this Australian standard, the text of the ISO Standard used herein should be modified as follows:

- (a) *Terminology.* The words 'Australian standard' should replace the words 'International Standard' wherever they appear.
- (b) *Cross-references.* The reference to International Standard ISO 1461, Metallic Coatings—Hot Dip Galvanized Coatings on Fabricated Ferrous Products—Requirements, should be replaced by reference to AS 1214, Hot-dip Galvanized Coatings on Threaded Fasteners (ISO Metric Coarse Thread Series).

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

STANDARDS ASSOCIATION OF AUSTRALIA

**Australian Standard**

**for**

**SHIPBUILDING—PILOT LADDERS**

**1 Scope and field of application**

This International Standard specifies requirements for a ship's pilot ladder which is provided for a pilot to embark and disembark safely.

**2 References**

ISO 1181, *Three- or four-strand manila and sisal ropes.*

ISO 1461, *Metallic coatings — Hot dip galvanized coatings on fabricated ferrous products — Requirements.*

ISO 7040, *Prevailing torque type hexagon nuts (with non-metallic insert), style 1 — Property classes 5, 8 and 10.*

ISO 7089, *Plain washers — Normal series — Product grade A.*

**3 Dimensions**

The dimensions of the assembled pilot ladder and of the components shall be in accordance with figures 1 to 6.

**4 Materials**

4.1 The materials of components shall be in accordance with table 1. Metal parts shall not be used in the pilot ladder construction, except for items 5, 9, 10 and 11 of table 1.

4.2 Steps, spreader steps, replacement step, replacement spreader step and split distance pieces shall each be made of hardwood (ash, oak, elm, beech or teak) free from knots, or from other materials having equivalent relative density, strength, durability and buoyancy. The lowest four steps may be made of rubber of sufficient strength and stiffness, or of other suitable material of equivalent characteristics. Steps and spreaders shall have an efficient non-slip surface.

4.3 The seizing for side ropes shall consist of two- or three-ply marline of minimum breaking strength 800 N, or other suitable material of equivalent strength.

**5 Construction**

5.1 The pilot ladder shall be assembled in accordance with figure 1 and table 2 to have an equal step spacing of 310 ± 5 mm.

5.2 Steps shall be constructed from one piece to the dimensions given in figure 2. Their non-slip upper surfaces shall be provided by either

- a) longitudinal grooving, or
- b) the application of an approved non-slip coating.

5.3 Spreader steps shall be constructed from one main bar and two split distance pieces to the dimensions given in figure 4, held firmly together by four M5 cup square bolts, washers and prevailing torque nuts. Metal parts shall be galvanized in accordance with ISO 1461. Spreaders shall be positioned in accordance with table 2.

**Table 1 — Components and materials**

Item	Component	Material	Specification
1	Step	Hardwood	See 4.2
2	Spreader step	Hardwood	See 4.2
3	Side ropes	Manila	ISO 1181, Quality 1
4	Side rope seizing	Marline	See 4.3
5	Fibre rope thimble	Steel, galvanized	Nominal size 20
6	Extension service rope	Manila	ISO 1181, Quality 1
7	Replacement step	Hardwood	See 4.2
8	Replacement spreader	Hardwood	See 4.2
9	Cup square bolt	Steel, galvanized	M5
10	Washer	Steel, galvanized	ISO 7089-5-140 HV
11	Prevailing torque nut	Steel, galvanized	ISO 7040-M5-5-NF
