

Australian/New Zealand Standard™

**Tests on electric and optical fibre cables  
under fire conditions**

**Part 1.1: Test for vertical flame  
propagation for a single insulated wire  
or cable—Apparatus**

AS/NZS IEC 60332.1.1:2017

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee EL-003, Electric Wires And Cables. It was approved on behalf of the Council of Standards Australia on 11 February 2017 and by the New Zealand Standards Approval Board on 7 March 2017.

This Standard was published on 1 May 2017.

The following are represented on Committee EL-003:

- Australian Cablemakers Association
- Australian Industry Group
- Electrical Compliance Testing Association of Australia
- Electrical Contractors Association of New Zealand
- Electrical Regulatory Authorities Council
- Institute of Electrical Inspectors
- National Electrical and Communications Association
- Queensland University of Technology
- Worksafe New Zealand

This Standard was issued in draft form for comment as DR AS/NZS IEC 60332.1.1:2016.

Australian/New Zealand Standard™

## **Tests on electric and optical fibre cables under fire conditions**

### **Part 1.1: Test for vertical flame propagation for a single insulated wire or cable—Apparatus**

First published in Australia as part of AS 1660.4—1974.  
Jointly revised and designated AS/NZS 1660.5.6:1998.  
Second edition 2005.  
Jointly revised and redesignated, in part, as AS/NZS IEC 60332.1.1:2017.  
Reissued with correct IEC text (February 2018).

## Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-003 Electric Wires and Cables, to supersede, in part, AS/NZS 1660.5.6—2005, *Test methods for electric cables, cords and conductors, Method 5.6: Fire tests—Test for vertical flame propagation for a single insulated wire or cable*.

The objective of this Standard is to specify the test apparatus for testing the resistance to vertical flame propagation for a single vertical electrical insulated conductor or cable, or optical fibre cable, under fire conditions.

This Standard is identical with, and has been reproduced from IEC 60332-1-1, Ed. 1.1 (2015), *Tests on electric and optical fibre cables under fire conditions, Part 1-1: Test for vertical flame propagation for a single insulated wire or cable—Apparatus*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text 'this part of IEC 60332 should read 'this Australian/New Zealand Standard'.
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

**TESTS ON ELECTRIC AND OPTICAL FIBRE CABLES  
UNDER FIRE CONDITIONS –**
**Part 1-1: Test for vertical flame propagation  
for a single insulated wire or cable – Apparatus**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

**DISCLAIMER**

**This Consolidated version is not an official IEC Standard and has been prepared for user convenience. Only the current versions of the standard and its amendment(s) are to be considered the official documents.**

**This Consolidated version of IEC 60332-1-1 bears the edition number 1.1. It consists of the first edition (2004-07) [documents 20/696/FDIS and 20/710/RVD] and its amendment 1 (2015-07) [documents 20/1590/FDIS and 20/1597/RVD]. The technical content is identical to the base edition and its amendment.**

**This Final version does not show where the technical content is modified by amendment 1. A separate Redline version with all changes highlighted is available in this publication.**

International Standard IEC 60332-1-1 has been prepared by IEC technical committee 20: Electric cables.

It has the status of a group safety publication in accordance with IEC Guide 104.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

IEC 60332 consists of the following parts, under the general title *Tests on electric and optical fibre cables under fire conditions*:

Part 1-1: Test for vertical flame propagation for a single insulated wire or cable – Apparatus

Part 1-2: Test for vertical flame propagation for a single insulated wire or cable – Procedure for 1kW pre-mixed flame

Part 1-3: Test for vertical flame propagation for a single insulated wire or cable – Procedure for determination of flaming droplets/particles

Part 2-1: Test for vertical flame propagation for a single small insulated wire or cable – Apparatus

Part 2-2: Test for vertical flame propagation for a single small insulated wire or cable - Procedure for diffusion flame

The committee has decided that the contents of the base publication and its amendment will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

## TESTS ON ELECTRIC AND OPTICAL FIBRE CABLES UNDER FIRE CONDITIONS –

### Part 1-1: Test for vertical flame propagation for a single insulated wire or cable – Apparatus

#### 1 Scope

This part of IEC 60332 specifies the test apparatus for testing the resistance to vertical flame propagation for a single vertical electrical insulated conductor or cable, or optical fibre cable, under fire conditions.

The procedure, together with an informative annex of recommended requirements for performance, is given in IEC 60332-1-2.

#### 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60695-4, *Fire hazard testing – Part 4: Terminology concerning fire tests*

IEC 60695-11-2, *Fire hazard testing – Part 11-2: Test flames – 1 kW nominal pre-mixed flame – Apparatus, confirmatory test arrangement and guidance*

IEC Guide 104, *The preparation of safety publications and the use of basic safety publications and group safety publications*

#### 3 Terms and definitions

For the purposes of this document, the following definition applies. The definition is taken from IEC 60695-4.

##### 3.1

##### **ignition source**

source of energy that initiates combustion

[SOURCE: ISO 13943:2008, 4.189]

#### 4 Test apparatus

##### 4.1 Components

The test apparatus shall comprise the following:

- a) a metal enclosure (4.2);
- b) an ignition source (4.3);
- c) a suitable chamber (4.4).
