

Australian/New Zealand Standard™

**Air-handling and water systems of
buildings—Microbial control**

Part 2: Operation and maintenance

AS/NZS 3666.2:2011

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee ME-062, Ventilation and Airconditioning. It was approved on behalf of the Council of Standards Australia on 20 July 2011 and on behalf of the Council of Standards New Zealand on 25 July 2011.

This Standard was published on 14 November 2011.

The following are represented on Committee ME-062:

Air Conditioning and Mechanical Contractors Association
Australasian Fire and Emergency Service Authorities Council
Australian Building Codes Board
Australian Institute of Refrigeration Air Conditioning and Heating
Chartered Institution of Building Services Engineers
Climate Control Companies Association
Consumer Electronics Suppliers Association
Department of Health and Human Services, Tas.
Engineers Australia
Facility Management Association of Australia
Institute of Refrigeration Heating & AirConditioning Engineers of New Zealand
NSW Health Department
Plastics and Chemicals Industries Association
Plumbing Industry Commission

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS 3666.2.

Australian/New Zealand Standard™

Air-handling and water systems of buildings—Microbial control

Part 2: Operation and maintenance

Originated as part of AS 3666—1989.
Previous edition AS/NZS 3666.2:2002.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee ME-062, Ventilation and Airconditioning, to supersede AS/NZS 3666.2:2002.

This Standard forms Part 2 of a series of Standards for the microbial control of air-handling and water systems of buildings, as follows:

AS/NZS

- 3666 Air-handling and water systems of buildings — Microbial control
- 3666.1 Part 1: Design, installation and commissioning
- 3666.2 Part 2: Operation and maintenance
- 3666.3 Part 3: Performance-based maintenance of cooling water systems
- 3666.4 Part 4: Performance-based maintenance of air-handling systems (ducts and components)

The term ‘informative’ has been used in this Standard to define the application of the appendix to which it applies. An ‘informative’ appendix is only for information and guidance.

STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

Australian/New Zealand Standard
Air-handling and water systems of buildings—Microbial control

Part 2: Operation and maintenance

SECTION 1 SCOPE AND GENERAL

1.1 SCOPE

This Standard specifies minimum requirements for the operation and maintenance of air-handling and water systems of buildings for the purposes of microbial control. It does not include requirements for refrigerated room airconditioners and non-ducted split systems.

NOTES:

- 1 In the event of an outbreak of legionnaire's disease, special action will be necessary. This will be advised by the health authorities.
- 2 Further information on the control of microbial growth in air-handling and water systems of buildings is given in HB 32.
- 3 Design, installation and commissioning requirements are given in AS/NZS 3666.1.
- 4 AS/NZS 3666.4 and AS/NZS 3666.3 provide performance-based alternatives to the prescriptive cleaning requirements of Clause 2.3 and 2.5 of this Standard.

1.2 OBJECTIVE

The objective of this Standard is to assist users in the control of microorganisms in building systems, particularly those associated with legionnaire's disease, pontiac fever, hypersensitivity pneumonitis and humidifier fever.

1.3 APPLICATION

This Standard is intended for use by regulatory authorities, building services designers, architects, equipment manufacturers and suppliers, installers, maintenance personnel, managers, owners, and operating staff responsible for designing, installing, commissioning, operating, and maintaining the air-handling and water systems of a building.

The Standard shall be read in conjunction with any additional recommendations given by suppliers of the equipment and with the requirements of any relevant specification or applicable legislation.

NOTE: This Standard has been developed for commercial building services systems. The technical content should be applied by the regulatory authority to other commercial or industrial systems and to domestic systems incorporating a cooling water system.
