USE OF X.25 TO PROVIDE THE  
OSI CONNECTION-MODE  
NETWORK SERVICE**

This Australian Standard was prepared by Committee IS/1, Information Processing Systems. It was approved on behalf of the Council of the Standards Association of Australia on 14 September 1988 and published on 12 December 1988.

---

The following interests are represented on Committee IS/1:

Australian Association of Permanent Building Societies  
Australian Bankers' Association  
Australian Bureau of Statistics  
Australian Computer Equipment Manufacturers Association  
Australian Computer Society  
Australian Computer Users Association  
Australian Computing Services Association  
Australian Information Industry Association  
CSIRO  
CSIRONET  
Department of Defence  
Department of Industry, Technology and Commerce  
Life Insurance Federation of Australia  
Public Service Board, N.S.W.  
Telecom Australia  
Universities and colleges

*Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.*

*Full details of all SAA publications will be found in the Catalogue of SAA Publications; this information is supplemented each month by SAA's journal 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.*

*Suggestions for improvements to Australian Standards, addressed to the head office of the Association, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.*

## PREFACE

This Standard was prepared by the Association's Committee on Information Processing Systems. It is identical with and has been reproduced from International Standard ISO 8878:1987, drawn up by ISO TC 97, Information Processing Systems.

This Standard defines two methods for providing the OSI Connection-Mode Network Service (CONS) through the use of the X.25 Packet Level Protocol (X.25/PLP). The first method, which is presented in the main body of the Standard, specifies a mapping between elements of the 1984 version of the X.25/PLP (X.25/PLP—1984) and elements of the OSI CONS. The second method, which is presented in Annex A, defines a Subnetwork Dependent Convergence Protocol (SNDCP) that shall be used to provide the OSI CONS over subnetworks or with equipment using the 1980 version of the X.25/PLP.

This Standard also specifies the conformance requirements for three classes of implementation. These requirements are applicable both to end system operation and to half the operation of a network layer relay. Where relay operation is concerned, the two halves of the relay may be the same or different classes of implementation.

The Standard is one of a series of Open Systems Interconnection (OSI) Standards which are currently under development. Since OSI Standards are developmental, there may be some minor difficulties encountered in their implementation. For this reason, SAA will be providing a limited interpretation service to coordinate and disseminate information concerning difficulties which are identified in using this Standard.

For the purpose of this Australian Standard, the text of the ISO Standard given herein should be modified as follows:

- (a) *Terminology.* The words 'Australian Standard' should replace the words 'International Standard' wherever they appear.
- (b) *Cross-references.* The references to International Standards should be replaced by references to Australian Standards as follows:

<i>Reference to International Standard</i>	<i>Australian Standard</i>

Users of Standards are reminded that copyright subsists in all SAA publications and software. Except where the Copyright Act allows and except where provided for below no SAA publications or software may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from the Standards Association of Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the Head Office of the Association.

SAA will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to SAA.

SAA will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by SAA at any time.

# Information processing systems—Data communications— Use of X.25 to provide the OSI connection-mode network service

## 0 Introduction

This International Standard defines two methods for providing the OSI Connection-Mode Network Service (CONS) through the use of the X.25 Packet Level Protocol (X.25/PLP). The first method, which is presented in the main body of this International Standard, specifies a mapping between elements of the 1984 version of the X.25/PLP (X.25/PLP-1984) and elements of the OSI CONS. The second method, which is presented in Annex A of this International Standard, defines a Subnetwork Dependent Convergence Protocol (SNDCP) that shall be used to provide the OSI CONS over subnetworks or with equipment using the 1980 version of the X.25/PLP. This SNDCP should only be used if the elements of the X.25/PLP-1984, as defined in 5.1 of this International Standard, are not available to support the OSI CONS.

Annex B gives the conformance requirements for equipment providing the OSI CONS by one or more of the methods in this International Standard and defines the possibilities and rules for interworking between such equipment.

Annexes A and B are integral parts of this International Standard. They are intended to provide a migration strategy towards the use of the 1984 version of X.25 in both subnetworks and DTEs. Their status will be reviewed periodically.

Annex C provides additional considerations on the relationship between the X.25 protocol procedures and the CONS primitives.

Annex D illustrates the use of X.25 Network Protocol Address Information (NPAI), i.e., the Address Field and the Address Extension Facilities.

Annex E illustrates the use of X.25 transit delay facilities.

The above three annexes are not integral parts of this International Standard.

The relationship between the X.25/PLP-1984 and the OSI CONS is shown in Figure 1. This relationship is described only in terms of the Network Layer entities that provide the CONS. No discussion is given here to describe the actions of a Network Layer entity that only provides a relay function for a given network connection.

The OSI Network Service is defined in terms of:

- a. the primitive actions and events of the Service;
- b. the parameters associated with each primitive action and event, and the form which they take; and
- c. the interrelationship between, and the valid sequences of, these actions and events.

The OSI Network Service does not specify individual implementations or products nor does it constrain the implementation of entities and interfaces within a computer system.

The X.25/PLP-1984 is defined in terms of:

- a. procedures for Virtual Calls and Permanent Virtual Circuits;
- b. formats of packets associated with these procedures; and
- c. procedures and formats for optional user facilities and CCITT-Specified DTE facilities.
