*Review of Australian Standards.* To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all SAA publications will be found in the Catalogue of SAA Publications; this information is supplemented each month by SAA's journal 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of the Association, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

---

*This Standard was issued in draft form for comment as DR 86098.*

### PREFACE

This Standard was prepared by the Association's Committee on Fire Hose Reels to supersede AS 1851.2—1981.

This edition introduces a maintenance requirement for fire hose reel pumps ensuring greater efficacy of the fire hose reel assembly. It also requires that any defect found during periodic inspections be reported to the building owner/occupier and where required the Regulatory Authority.

A requirement has been introduced for the six-monthly inspection to ensure that any corrosion or damage does not adversely affect the operation of the reel.
