

Methods of test for vitreous enamel coatings**Method 3.1: Miscellaneous tests—Method of test of self-cleaning properties**

PREFACE

This Standard was prepared by Standards Australia Committee CH-007, Vitreous Enamel Finishes to supersede AS 2219.3.1—1978, *Determination of the performance of continuous cleaning vitreous enamel coatings*.

This Standard is identical with and has been reproduced from ISO 8291:1986, *Vitreous and porcelain enamels—Method of test of self-cleaning properties*.

This Standard is Part 3.1 of a series of Standards covering the chemical testing of vitreous enamel coatings.

The series comprises the following Parts:

AS

2219 Methods of test for vitreous enamel coatings

2219.3.1 Method 3.1: Miscellaneous tests—Method of test of self-cleaning properties

2219.3.2 Method 3.2: Miscellaneous tests—Production of specimens for testing

2219.3.3 Method 3.3: Miscellaneous tests—Determination of the adhesion of enamels on aluminium under the action of electrolytic solution (spall test)

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title pages.
- (b) In the source text, ‘this international Standard’ should read ‘this Australian Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to international Standards should be replaced by references to Australian Standards, as follows:

<i>References to International Standards</i>	<i>Australian Standard</i>
