Australian/New Zealand Standard™

Information technology — Governance of IT — Application of ISO/IEC 38500 to the governance of IT enabled investments

AS/NZS ISO/IEC 38506:2020

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee IT-030, ICT Governance and Management. It was approved on behalf of the Council of Standards Australia on 25 November 2020 and by the New Zealand Standards Approval Board on 2 December 2020.

This Standard was published on 11 December 2020.

The following are represented on Committee IT-030:

- Australian Information Industry Association
- Australian Institute of Company Directors
- Consumers' Federation of Australia
- Department of Finance (Australian Government)
- Governance Institute of Australia
- Institute of Internal Auditors — Australia
- ISACA
- IT Professionals New Zealand
- IT Service Management Forum (Australia)
- Manukau Institute of Technology
- NSW Department of Customer Services
- Project Management Institute Australian Chapters
- Women on Boards

This Standard was issued in draft form for comment as DR AS/NZS ISO/IEC 38506:2020.

Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee IT-030, ICT Governance and Management.

The objective of this document is to provide guidance on governance of IT enabled investments to the governing body of all forms of organizations, whether private, public or government entities, and will equally apply regardless of the size of the organization or its industry or sector. The terms “business” and “business outcome” throughout this document include all forms of organization.

This document provides guidance to other parties interacting with governing bodies such as project personnel, accountants, management consultants, investment portfolio managers and governance support staff.

This document also provides guidance that can be applied in the due diligence process related to business acquisitions. This document may provide guidance on the application of the principles documented in AS ISO/IEC 38500 for ranking IT enabled investments including assessing the value and risks of IT elements in the context of investment banking or as performed by investment companies.

This document does not prescribe or define specific management practices required for IT enabled investments.

This document is identical with, and has been reproduced from, ISO/IEC 38506:2020, *Information technology — Governance of IT — Application of ISO/IEC 38500 to the governance of IT enabled investments*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see <http://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 40, *IT Service Management and IT Governance*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

In today's rapidly evolving digital age, the world is experiencing unpredictable changes through shifts in political and economic power combined with disruptive business models, seemingly constant technology breakthroughs and innovative approaches to conducting business.

How can governing bodies prepare their organizations to address constant and new challenges while being ready for an increasing information and technology driven future?

Information Technology (IT) supports the core functions of all organizations, underpins the basis of almost all business activities and interfaces with customers and other stakeholders. Investments in IT enablement and the contribution of IT to the business capability and performance of the organization play a significant role in the achievement of strategic plans and the delivery of business value.

Effective governance of IT enabled investments will provide governing bodies with a better understanding of their obligations and how value is derived to support the organization's business opportunities and to appropriately mitigate the organisation's risk.

Risks comprise such things as the failure to deliver required capabilities, failure of the business to achieve the required benefits, with the impact on the organization leading to e.g. business disruption, breach of obligations, regulatory non-compliance, failures of security, loss of data, down time. Effective governance will proactively prevent or mitigate the IT aspects of the risk of such events occurring, for example, by addressing prolonged underinvestment.

Governance of IT, including investments in IT, is part of sound corporate governance. Governance of IT is not IT management but should be supported by a governance framework and the organization's IT management system.

This document provides guidelines to members of the governing bodies to apply the principles and model documented in ISO/IEC 38500 to IT enabled investments. Throughout this document the word "investments" is synonymous with IT enabled investments.

NOTES

Australian/New Zealand Standard

Information technology — Governance of IT — Application of ISO/IEC 38500 to the governance of IT enabled investments

1 Scope

This document provides guidance on governance of IT enabled investments to the governing body of all forms of organizations, whether private, public or government entities, and will equally apply regardless of the size of the organization or its industry or sector. The terms business and business outcome throughout this document include all forms of organization covered by this document.

The document also provides guidance to other parties interacting with governing bodies such as project personnel, accountants, management consultants, investment portfolio managers and governance support staff.

IT enabled investments within the scope of this document could be investments of any scale from acquiring businesses to any business change incorporating IT, building new business services or addressing effectiveness and efficiency gains in IT operational services to gain competitive edge, whether those services are internal or provided by external parties.

Resource allocation for strategic innovation is addressed by providing guidance to the governing body's decision for investment resource allocation between short-, medium- and long-term innovation projects.

This document also provides guidance that can be applied in the due diligence process related to business acquisitions. This document may provide guidance on the application of the principles documented in ISO/IEC 38500 for ranking IT enabled investments including assessing the value and risks of IT elements in the context of investment banking or as performed by investment companies.

This document does not prescribe or define specific management practices required for IT enabled investments.

ISO/IEC TS 38501 contains guidance on the implementation arrangement for the effective governance of IT in general. The constructs in ISO/IEC TS 38501 can help to identify internal and external factors relating to the governance of IT and to define beneficial outcomes and identify evidence of success. ISO/IEC TR 38502 contains guidance on the integration between the governing body and management of an organization in general.

This document is written in accordance with the principles of ISO/IEC TR 38504:2016.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
