## Preface

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee ME-005, Cranes.

After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this Standard is to establish the general criteria for the provision of anchoring devices for cranes and crane parts for in-service and out-of-service conditions.

This Standard is an adoption with national modifications and has been reproduced from ISO 12210-1:1998, *Cranes — Anchoring devices for in-service and out-of-service conditions — Part 1: General*. The modifications are additional requirements and are set out in [Appendix ZZ](#), which has been added at the end of the source text.

[Appendix ZZ](#) lists the variations to ISO 12210-1:1998 for the application of this Standard in Australia.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text “this part of ISO 12210” should read “this Australian Standard”.
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific standards.

The term “normative” is used in Standards to define the application of the appendices or annexes to which it applies. A “normative” appendix or annex is an integral part of a Standard.
