Discussion is welcomed for all materials published in this issue and will appear ten months from this journal's date if the discussion is received within four months of the paper's print publication. Discussion of material received after specified dates will be considered individually for publication or private response. ACI Standards published in ACI Journals for public comment have discussion due dates printed with the Standard.

The Institute is not responsible for the statements or opinions expressed in its publications. Institute publications are not able to, nor intended to, supplant individual training, responsibility, or judgment of the user, or the supplier, of the information presented.

The papers in this volume have been reviewed under Institute publication procedures by individuals expert in the subject areas of the papers.

Preface

The Canada Centre for Mineral and Energy Technology (CANMET) of Natural Resources of Canada, Ottawa, ON, Canada, has played a significant role for more than 40 years in the broad area of concrete technology in Canada. In recent years, CANMET has become increasingly involved in research and development dealing with supplementary cementitious materials, high-performance normalweight and lightweight concretes, and alkali-aggregate reactions. As part of CANMET's technology transfer program, an international symposium on Advances in Concrete Technology was sponsored jointly with the American Concrete Institute (ACI) and other organizations in Athens, Greece, in May 1992. In June 1995, CANMET, in association with ACI and other organizations in Canada and the United States, sponsored the Second CANMET/ACI Symposium on Advances in Concrete Technology in Las Vegas, NV, USA. For the Athens symposium, the CANMET publication "Advances in Concrete Technology," constituted the proceedings of the symposium. The proceedings from the Las Vegas symposium were published by ACI as SP-154.

In August 1997, CANMET, in association with ACI and other organizations in Canada and New Zealand, sponsored the Third CANMET/ACI Symposium on Advances in Concrete Technology in Auckland, New Zealand. The main purpose of the symposium was to bring together representatives from industry, universities, and government agencies to present the latest information on concrete technology, and to explore new areas of research and development. Thirty-three refereed papers from 15 countries were presented and distributed at the symposium. The proceedings were published as ACI SP-171.

In June 1998, CANMET, in association with ACI, Japan Concrete Institute (JCI), and several other organizations in Canada and Japan, sponsored the Fourth CANMET/ACI Conference on Recent Advances in Concrete Technology in Tokushima, Japan. More than 80 papers from 20 countries were received and reviewed in accordance with the policies of ACI. Sixty-one refereed papers were accepted for presentation at the conference and for publication as ACI SP-179. In addition to the refereed papers, more than 30 papers were presented and distributed at the conference.

In July-August 2001, CANMET, in association with ACI and several organizations in Singapore, sponsored the Fifth CANMET/ACI Conference on Recent Advances in Concrete Technology in Singapore. More than 100 papers from 25 countries were received and reviewed in accordance with the policies of ACI. Forty-six refereed and more than 25 additional papers were accepted for presentation at the conference. The proceedings of the conference were published as ACI SP-200.

In June 2003, CANMET, in association with ACI and several organizations in Romania, sponsored the Sixth CANMET/ACI Conference on Recent Advances in Concrete Technology in Bucharest, Romania. More than 40 papers presented at the conference were distributed "as received," and no formal ACI special publication was published.

In May 2004, CANMET, in association with ACI and several other organizations in the United States, sponsored the Seventh CANMET/ACI Conference on Recent Advances in Concrete Technology in Las Vegas, NV. Seventeen refereed papers from more than 10 countries were presented and distributed at the conference. The proceedings of the conference, consisting of the refereed papers, were published as ACI SP-222. In addition to the refereed papers, 20 additional papers were presented and distributed at the conference.

In May 2006, CANMET, in association with ACI and several other organizations in Canada and the United States, sponsored the Eighth CANMET/ACI Conference on Recent Advances in Concrete Technology in Montreal, QC, Canada. The proceedings of the conference, consisting of 17 refereed papers, were published as ACI SP-235. In addition to the refereed papers, more than 30 additional papers were presented and distributed at the conference.

In May 2007, CANMET, in association with ACI and several other organizations in Canada, Europe, and the United States, sponsored the Ninth CANMET/ACI Conference on Recent Advances in Concrete Technology in Warsaw, Poland. The proceedings of the conference, consisting of 10 refereed papers, were published as ACI SP-243. More than 20 additional papers were presented and distributed at the conference.

In October 2009, ACI, in association with several organizations in Canada, Europe and the United States, sponsored the Tenth ACI Conference on Advances in Concrete Technology in Seville, Spain. The proceedings of the conference, consisting of 20 refereed papers, were published as ACI SP-261. In addition to the refereed papers, more than 20 additional papers were presented at the conference and published in a supplementary papers volume.

In May 2010, the Committee for the Organization of International Conferences (COIC) (formerly CANMET/ACI Conferences), in association with the Chinese Ceramics Society (CCS) and several other organizations in China, sponsored the Eleventh International Conference on Advances in Concrete Technology and Sustainability Issues in Jinan, China. More than 40 papers were presented at the conference. The proceedings of the conference were published by the CCS, Beijing, China.

In October 2012, the COIC, in association with ACI, sponsored the Twelfth International Conference on Advances in Concrete Technology and Sustainability Issues in Prague, Czech Republic. The proceedings of the conference, consisting of more than 30 refereed papers, were published as ACI SP-288. In addition to the refereed papers, more than 40 other papers were presented at the conference and published in a supplementary papers volume.

In July 2015, the COIC, in association with ACI, sponsored the Thirteenth International Conference on Advances in Concrete Technology and Sustainability Issues in Ottawa, ON, Canada. The proceedings of the conference, consisting of 28 refereed papers, were published by ACI as SP-303. In addition to the refereed papers, more than 40 other papers were presented at the conference and published in a supplementary papers volume.

In October 2018, the CCS and the China Academy of Building Research (CABR), Beijing China, in association with the COIC sponsored the Fourteenth International Conference on Recent Advances in Concrete Technology and Sustainable Issues in Beijing, China. The proceedings of the conference, consisting of 19 refereed papers, were published by ACI as SP-330. In addition to the refereed papers, more than 52 other papers were presented at the conference and published in a supplementary papers volume.

In July 2022, after a postponement for the COVID-19 pandemic, the ACI Italy Chapter and the University of Bergamo, Italy, sponsored the Fifteenth International Conference on Recent Advances in Concrete Technology and Sustainable Issues in Milan, Italy.

The proceedings of the conference, consisting of 44 refereed papers, were published by ACI as SP-355. In addition to the refereed papers, about 20 other papers were presented at the conference and published in a supplementary papers volume.

The main topics of the papers presented at the conference include: the deterioration of concrete structures; the corrosion of metallic reinforcement; the repair techniques of damaged concrete structures by using shrinkage-compensating cement-based mixtures; the protection of concrete structures by special materials to obtain watertight concrete; the reduction of the damage caused by alkali-silica reaction; the use of mineral additions such as fly ash, silica fume, and ground-granulated blast-furnace slag to improve the durability of concrete structures; and the production of concrete by reducing gas emissions and energy consumption such as the use of binders alternative to portland cement (alkali activated materials, geopolymers, sulphoaluminate cement) and recycling of wastes coming from different sources.

Thanks are extended to the reviewers for the valuable efforts in reviewing all the manuscripts published in the conference proceedings and in the supplementary volume.

The guidance from Dr. V. M. Malhotra and Prof. M. Collepardi, the Honorary Chairpersons of the conference, is sincerely appreciated.

Also, acknowledged is the support the American Concrete Institute for the publication of the proceedings (ACI SP-355).

TABLE OF CONTENTS

SP-355-1:

Low-Carbon Durable Concrete for the New Genoa's San Giorgio Bridge.....1-10
Authors: Gilberto Artioli, Anna Bravo, Stefano Broggio, Giorgio Ferrari, Francesco Santonicola,
Francesco Surico, Luca Torelli, Luca Valentini, Andrea Zecchini

SP-355-2:

Dynamic Behavior of Two UHPC Matrixes in Direct Tension11-18
Authors: Ezio Cadoni, Deborah Briccola, Matteo Dotta, Daniele Forni

SP-355-3:

Fresh Properties of Alkali-Activated Slag Pastes with Sodium and Potassium Hydroxide19-28
Authors: Vlastimil Bílek Jr., Lukáš Kalina, David Markusík

SP-355-4:

Characterization of Quarry Waste Powder for Calcined Clay Production..... 29-40
Authors: Gabriela Coelho dos Santos, Natalia Alderete, Yury Villagrán-Zaccardi, Nele De Belie

SP-355-5:

New Test Method for Alkali-Silica Reaction (ASR) and the Role of Additional Calcium Ions in the
Reaction Process41-52
Authors: Frank S. Ong, Michael Myers, Mark Bury, Trevor Larch, Charles Nmai, Paul Seiler,
Lesley S. C. Ko

SP-355-6:

Recycled Self-Compacting Concrete: Mechanical Behavior and Durability 53-68
Authors: Víctor Revilla-Cuesta, Marta Skaf, José A. Chica, Roberto Serrano-López, Vanesa Ortega-López

SP-355-7:

Superplasticizers for Calcined Clay Blended Cements 69-80
Authors: Ran Li, Marlene Schmidt, Tongbo Sui, Johann Plank

SP-355-8:

Lowering the Clinker Factor of Limestone Calcined Clay Cements (LC³) below 50%:
A Comparison with Natural Pozzolans..... 81-88
Authors: Franco Zunino, Karen L. Scrivener

SP-355-9:

Rehabilitation of Buildings Polluted by the Radon Radioactivity 89-92
Authors: Mario Collepari, Silvia Collepari, Roberto Troli

SP-355-10:

Bond Behavior of Steel Rebars in High-Performance Fiber-Reinforced Concretes:
Experimental Evidences and Possible Applications for Structural Repairs 93-108
Authors: Alessandro Pasqualini, Marco Pepe, Felice Marco Liberatore, Carmine Lima,
Marco Bressan, Enzo Martinelli

SP-355-11:

Production of Lightweight Aggregates by Means of Cold-Bonding Granulation Process of
Municipal Solid Waste Incinerator (MSWI) Fly Ash 109-114
Authors: Ilenia Farina, Cinzia Salzano, Marco de Pertis, Alberto Ferraro, Francesco Colangelo,
Raffaele Cioffi

SP-355-12:

Self-Sensing Mortars with Recycled Carbon-Based Fillers and Fibers115-132
Authors: Alberto Belli, Alessandra Mobili, Tiziano Bellezze, Paulo B. Cachim, Francesca Tittarelli

SP-355-13:

Cement-Based Composites in Structural Health Monitoring..... 133-150
 Authors: Francesca Tittarelli, Alessandra Mobili, Paolo Chiariotti, Gloria Cosoli, Nicola Giulietti, Alberto Belli, Giuseppe Pandarese, Tiziano Bellezze, Gian Marco Revel

SP-355-14:

Microstructure of Cement/Clay Paste with Aluminum Bar after 1 Year Storage in Fresh Water and in 6% NaCl151-164
 Authors: Harald Justnes, Tobias Danner

SP-355-15:

A Review of Current Superplasticizers Highlighting their Specific Properties and Advantages 165-180
 Authors: Johann Plank, Lei Lei

SP-355-16:

Effective Protection of Concrete Against Carbonation by a Protective Render Coating 181-200
 Authors: Lukáš Hůlek, Michal Bačuvčík, Ivan Janotka, Jakub Gašpárek, Peter Paulík

SP-355-17:

Preliminary Characterization of Concrete Made with RAP Aggregate..... 201-212
 Authors: E. Redaelli, M. Carsana, A. Filippi, F. Lollini

SP-355-18:

Data-Driven Decision-Making to Inform Sustainable Performance-Based Specifications213-224
 Authors: Renee T. Rios, Francesca Lolli, Katelynn Schoenrock, Kimberly E. Kurtis

SP-355-19:

Effect of Aggregates and Layer Height on the Acoustic Absorption of Pervious Concrete.....225-234
 Authors: N. Klein, F. Lang-Scharli, T. Kränkel, C. Gehlen

SP-355-20:

Influence of Steel Fibers on Durability Properties of UHPFRC235-244
 Authors: Bianca Paola Maffezzoli, Dario Redaelli, Elena Redaelli

SP-355-21:

Characterization of Recycled Asphalt Pavement as Aggregate for Concrete245-262
 Authors: Andrea Filippi, Maddalena Carsana, Federica Lollini, Elena Redaelli

SP-355-22:

Measurement of the Radiation Shielding Performance of GRC Composite Materials263-270
 Authors: Ozlem Akalin, Ahmet Seven, Muhammed Marasli, Iskender A. Reyhancan, M. Hulusi Ozkul

SP-355-23:

Study of the Effect of Different Type of Clays on the Initial Flowability of Mortars in the Presence of Polycarboxylate Superplasticizers.....271-282
 Authors: Paolo Fornoni, Matteo Destefani, Emanuele Moretti, Francesco Surico, Gilberto Artioli, Maria Chiara Dalconi

SP-355-24:

Influence of Cement Type and Curing Conditions on the Flexural Strength and Microstructure of Mortars Reinforced with Sheep Wool Fibers283-292
 Authors: Daria Jóźwiak-Niedźwiedzka, Alessandro P. Fantilli

SP-355-25:

Multi-Objective Design of LC³: Sustainability and Strength..... 293-306
 Authors: Oğulcan Canbek, Francesca Lolli, Christopher M. Childs, Newell R. Washburn, Kimberly E. Kurtis

SP-355-26:

Mix-Designs of Concretes in Durable Reinforced and Prestressed Structures of a Viaduct for a Railway Train Connecting Venice with Cortina, in Italy307-316
 Authors: Mario Collepari, Silvia Collepari, Roberto Troli

SP-355-27:

Effect of Different Environmental Exposures on the Mechanical Behavior of Enhanced Carbon
FRCM Systems.....317-324
Authors: Jacopo Donnini, Francesca Bompadre, Valeria Corinaldesi

SP-355-28:

Innovative Admixtures to Address Operational and Sustainability Issues with Returned Concrete.....325-336
Authors: Charles Nmai, Chris Eagon, John Luciano

Low-Carbon Durable Concrete for the New Genoa's San Giorgio Bridge

Gilberto Artioli, Anna Bravo, Stefano Broggio, Giorgio Ferrari,
Francesco Santonicola, Francesco Surico, Luca Torelli,
Luca Valentini, Andrea Zecchini

Synopsis: The new San Giorgio bridge replaced the Polcevera viaduct, built between 1963 and 1967 and collapsed during a storm in summer 2018. The new bridge was designed by Renzo Piano and is made by 19 steel spans supported by 18 concrete pillars. Beside the architectural aspects, special attention was devoted to the mix-design of the pillars, to ensure the production of durable concrete in the marine environment. The use of slag cement combined with limestone filler and polycarboxylate superplasticizers allowed to cast flowable concrete associated with low water to cement ratio and high final compressive strength. A new generation accelerating admixtures, working on the homogeneous nucleation technology, was used to accelerate the cement hydration and gain early compressive strength to speed-up the elevation of the pillars. In the present paper, the advantage of using the new admixture is discussed both in terms of early strength development and microstructure of the cement paste. Beside the improvement of the early strength development, the new admixture reduced the water permeability and the chloride diffusion and improved the resistance to carbonation of the concrete used for the pillars, with further advantages for the durability of this structure.

Keywords: carbonation, chloride penetration, durability, homogeneous nucleation, microstructure, PCE-nanocomposites, water permeability.
